Everyone needs a vacation or recreation. How better can you restore your energy, spirit and ambition than to work in your garden or rest in your home surrounded by beautiful trees, shrubs and flowers.

Even when the soldier returns for a furlough or for good, he will enjoy your beautiful garden and will fight with renewed vigor for a home that is made more attractive by the use of plant material. All of the plants listed here were propagated before Pearl Harbor, are mostly 2-5 years old and their care in the nursery does not interfere with the war effort. Small plants transplant more readily than large ones and for those living a distance from nurseries will be far more economical.

Why not start a small nursery of your own and by means of patience, persistence and affection nurture these small plants we have to offer? Within a few years for a few dollars you will have a priceless collection of rare and unusual garden material. Plants are among the few things you can buy that increase in value after you buy them. Be the only one in your town to possess some of these very rare plants.

The plants we have to offer are vividly described in Hotte's Book on Shrubs @ \$3.00 postpaid and Book on Trees at \$3.50 pos tpaid. We can supply both. All plants should be grown in a bed for one or more years before planting in permanent place.

For \$5.00 you can select \$6.00 worth of plants from this list. Prices include packing and postal charges. As we sell our plants at such low prices no order for less than \$2.00 will be accepted. No broken lots will be sold. Where order calls for 5 for 50 cts., one will not be sold for 10 cts. 5 must be ordered. 25 sold at 100 rate.

Please suggest one substitute per 10 items ordered.

Owing to our careful packing with wet peat moss; the cost of Express and Parcel Post to points beyond Rocky Mountains, eliminate the profits. Therefore, please add 10% to remittances from these places.

The group containing Azaleas and Rhododendrons are easy to handle if planted in part shade, provided either by a building or a lath screen; this should be elevated 4' to 5' on stakes to provide free circulation of air underneath. Plant in a soil mixture containing 50% good light garden loam and 50% granulated peat moss or oak leaf mould. Water well after planting and mulch with leaf mould or peat moss. Do not cultivate but pick weeds out by pulling. Do not allow ground to get dry, but do not water too much or too often, there is a happy medium. These plants will all do well in part shade and also in sun. Cut off 75% of light for first 6 weeks and then 50%.

AZALEAS, RHODODENDRONS AND OTHER ACID LOVING PLANTS:

"Chinese" E. H. Wilson said, speaking of Azaleas, "They are not surpassed in wealth of blossom by any class of hardy shrubs. The flowers vary enormously in size in the different species and embrace all shades of every color except blue. In many the flowers are delightfully fragrant, -- small wonder the desire to possess them is so general. No class of shrubs possess greater attractions, and given certain essential conditions and provided the varieties are perfectly hardy their culture is fairly simple."

A Philadelphia collection of Azaleas and Rhododendrons is visited each year by thousands of people who marvel at the brilliant, vivid colors and profusion of bloom, which is almost unbelievable, and yet for a few dollars and a bit of patience a more extensive range of colors and varieties is available from this list. All are transplants except Kurume Seedlings.

In winter time American gardens present a dismal, naked sight that emphasizes
 the general dreariness of the season. Little of the beauty of spring, summer or fall re-
 mains. Yet it is so easy to change this with a few evergreen vines, shrubs and trees and
 some bright berried shrubs. With an attractive evergreen background, winter seems shorter
 and much more pleasant and nothing is a more beautiful sight than to see them partly cov-
 ered with snow.

EVERGREEN TREES AND SHRUBS. Plant in any good soil. All should be well
 shaded for 2 months after planting with a lath shade or planted in part shade of a build-

Most Pines grow rapidly, some more rapidly than deciduous trees, making as
 much as 30 inches a year. Make good screens, backgrounds and the best possible windbreaks.
 With a good Pine border on the windward side, your home will seem 500 miles further south
 and you will be able to grow plants that are otherwise impossible. A windbreak of pines
 will make your home more comfortable and life more pleasant, by protecting it from the
 cold winds.
